35. Information which you feel pertinent and which is not adequately covered in the specific points of the questionnaire or a narrative explanation of your sighting.

When I first saw the object it appeared as a bright star, about the size of a small apple, which seemed to flicker around the edges. I sent my son indoors to get the binoculars. When I viewed the object through the binoculars I was surprised to note that this was not one object but a series of eight smaller lights in this pattern:

o o o o
o o o o

They were red, green and white. I think 2 were red, 2 white and four green. But I'm not certain of the exact amount of each color. I have often watched jets fly over and this trailed at a much greater speed. But yet did not exactly streak across the sky. It seemed to maintain a fairly steady speed. We watched it from the front of our home and continued on until we thought it was out of sight. Then it suddenly changed direction and trailed at a sharp right angle from its original course until it was out of sight.
